SET UP CANON PRINTER || IJ.START.CANON

ij.start.canon : Setting up your canon printer will take a few moments to get ready. However, it's important to connect your inkjet printer and PC, Laptop with a wireless connection. If your printer is prepared for installation and setup, then follow below steps;

1. Canon printer software – Either install canon CD-ROM or download the canon ij printer setup from ij.start.canon.
2. Connect to WiFi – On your IJ printer, press the WiFi button until you see a stable orange alarm flashlight.
3. Wireless router – Press the WPS button on the nearby wireless router and wait for the alarm flash to be steady green and blue lights.
4. Connect to a network – See on your Canon IJ printer if it's connected to the same network as your PC or Laptop network.
5. Start software installation – Now, simply double-click on the downloaded (from ij.start.canon) setup file [PKG or EXE].
6. Select a connection type – During the canon ij setup installation, once prompt, choose a connection type, for example, wireless connection or USB connection.
7. Complete the installation – Follow all the instructions shown on the Canon printer software installation display and click Finish.
8. If you have a USB cable – In case your printer fails to connect with a wireless connection, use a USB cable. Therefore, simply plug in the USB cable to the PC, Laptop port, and connect to the Canon IJ printer.
9. Your canon inkjet printer is ready to use (print, scan, fax etc).
